

ROSworks announces ROS features for SY 09-10!

*Use “widgets” in online tests.
Create and edit individual items online.
Import user-content easily from several formats.
Use all subscribed TfHS content for any test.
Monitor usage metrics in the new Dashboard.
Speed through with fast loading screens.
Quickly access many powerful reports.*

ROS

REPORTS ONLINE SYSTEM

Helping schools put the pieces of the assessment puzzle together.

The Details

ROS online testing offers the students widgets/tools similar to the State's SOL tests.

- Strike/Eliminate widget marks out answer choices (persistent through a test session).
- Highlighter widget highlights text (persistent through a test session).
- Eraser widget removes marks made by straightedge, compass, or highlighter widgets.
- Popup-reference widget displays formula sheets, periodic table, etc.
- Calculator widget performs basic calculations.
- Ruler widget measures length.
- Straightedge widget draws straight lines.
- Protractor widget measures angles.
- Compass widget draws circles and arcs.

ROS has an easy-to-use online test item creator/editor for new or current test items — used in conjunction with our test assembler.

ROSworks has extensive test importing abilities.

- ROS supports importing from several ExamView® formats (XML and Blackboard).
- ROS supports importing from several MS Word® formats with a new importer.
- ROSworks will add support for new document types throughout the year. (Requests may be made via e-mail: support@rosworks.com or phone 866-724-9722.)

ROS supports any subscribed Tests for Higher Standards™ (TfHS) content for online or paper testing.

- TfHS content can be used alone or mixed with local content for both online and paper-based tests.
- Access to GL, SAB, or SIM content can be controlled for teachers and administrators by grade and subject.

ROS has a dashboard area to supply additional system information.

- Administrators can get roster and NCLB information.
- Statistics on # of tests administered, # of logins by type of account.
- Announcements of new features and availability of new subscribed material.
- The dashboard will be enhanced with additional functionality during the year.

ROS reports are very powerful, flexible, and easy to access.

- Aspects of reports are customizable (info shown, formats, sorting, etc.).
- Reports always contain “live data” and process quickly.

ROSworks has a easy, fast, and customizable interface.

- Users can customize their display to show only selected tests; e.g., an elementary teacher can display just grade 4; an English teacher can show 9-12th grade English.
- Help system provides in-depth information.
